Allowable Subject Matter

Claims 15-16, 18-23 and 29-31 are allowed.

Art Unit: 2814

The following is an examiner's statement of reasons for allowance:

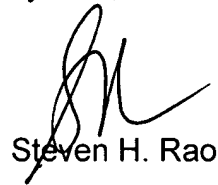

The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitation of the dependent claims, in such manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claim (15) which include a method of manufacturing a flexible display including depositing a plurality of shaped blocks each of which has an active circuitry for a display driver, onto a flexible web substrate which has a plurality of recessed regions configured to receive the plurality of shaped blocks therein wherein at least one of each shaped blocks includes an active circuit element for driving a picture element. The shaped blocks (on the flexible web substrate) are coupled to a receiver that transmits signals to cause the active circuit element of at least one shaped block to drive the picture element and wherein at least a portion of the flexible web substrate forms a back plane for the flexible display and coupling a display panel to said backplane to form the flexible display wherein the display panel is coupled to the backplane in a continuous web process line that is used to deposit the plurality of shaped blocks and the receiver to the flexible web substrate.
